

# Rhino e55 Touch

55" IP66 Weather Proof LCD

The Rhino e55 Touch is the first in a new range of weatherproof displays designed specifically for the signage market place. It combines a full front surface touch interface utilising Samsungs latest LED lit technology which uses only 90 Watts of power. The vandal resistant laminated glass front panel is designed to withstand the rigours of the outside environment. This includes both pressurised water and dust ingress.

The use of the LED back lit displays allows the total depth to be shrunk to 78mm. This includes touch screen, LCD and embedded PC.

The units are made from structural steel which delivers a tough robust housing for the LCD's to be wall mounted directly. The glass is laminated, the same as a windscreen in a car, which can withstand minor abuse. The screens themselves have a locking mechanism that seals the enclosure.

## Weather Proof IP66 Touch LCD

- Weather Proof IP66
- Full HD LCD
- LED Rear lit
- Capacitive Touch Panel
- Eco friendly - 90 watts
- No Drift
- Vandal Resistant
- Scratch Resistant
